## Generate PDF Reports in ASP.NET with C# or VB

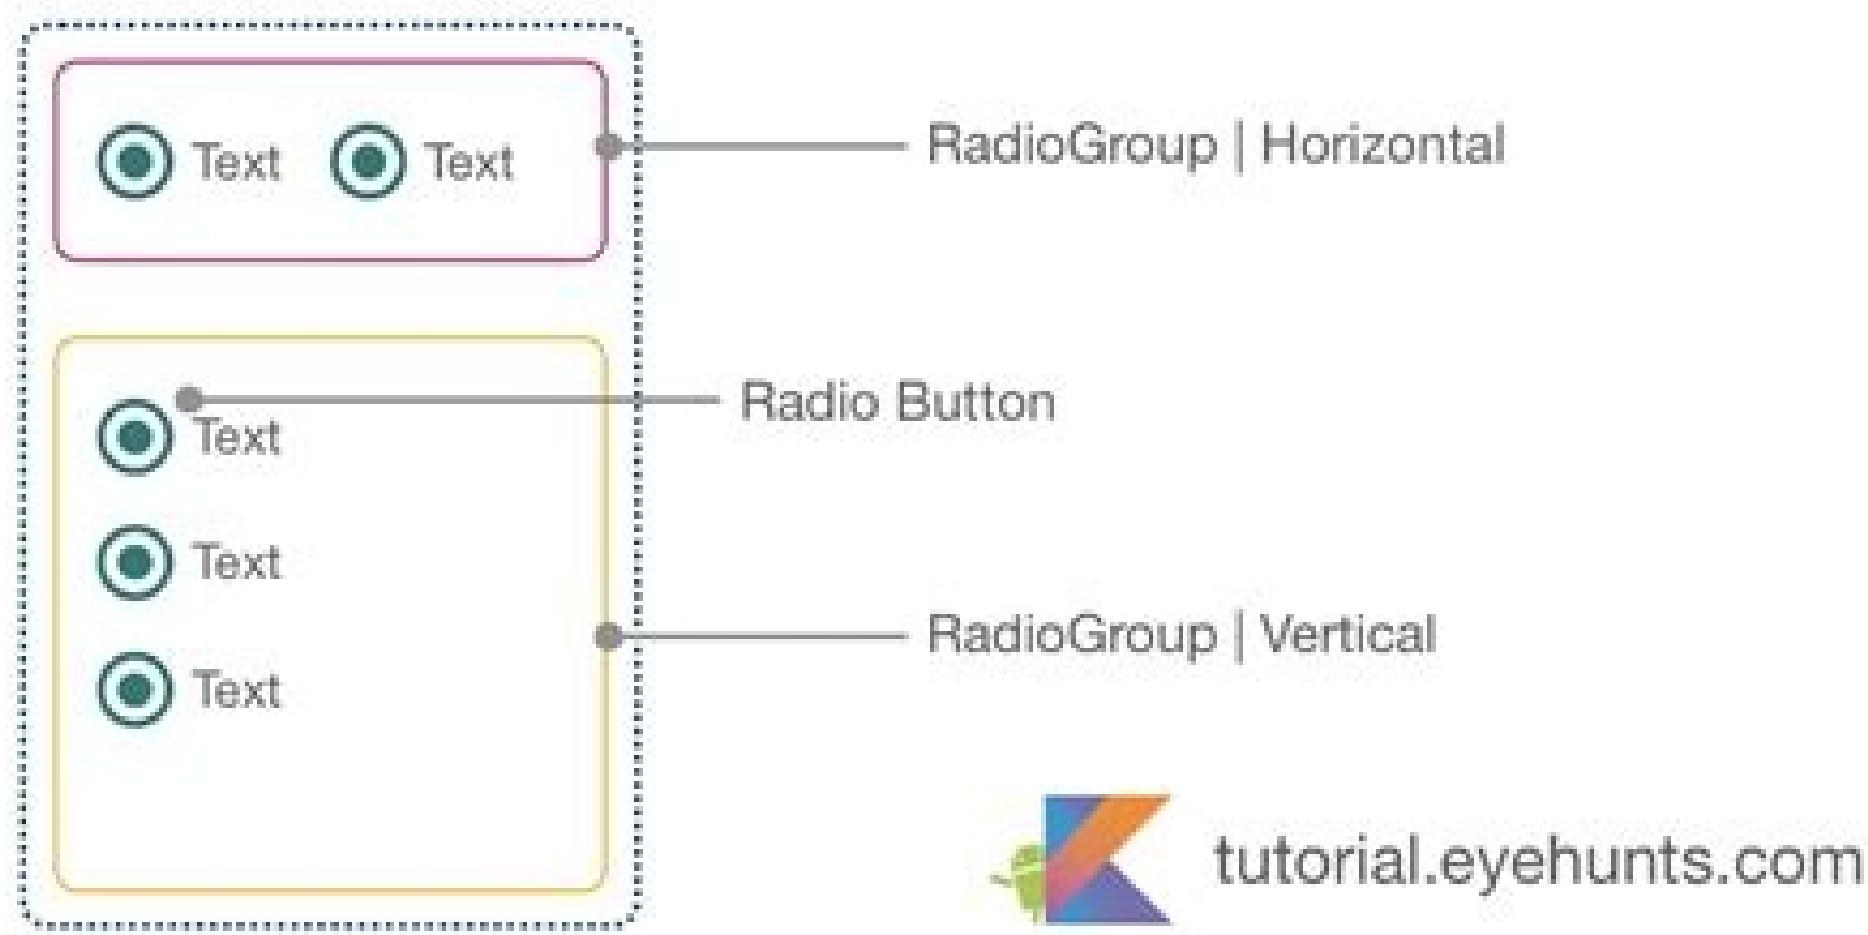

Generating management or database reports from structured data such as SQL is a common .NET development task. IronPDF can be used as a [PDF reader C#](#) and help visualise and export ssrs reports to PDF in ASP.NET csharp.

IronPDF can be used to render snapshots of data as "reports" in the PDF File Format. It also works as a [PDF C# parser](#).

### Methodology

The basic methodology is to first generate the report as a HTML document - and then render the HTML as a PDF using IronPDF. This tutorial will show you how to create a pdf report in asp .net c#.

```
1.
2. IronPdf.HtmlToPdf Renderer = new IronPdf.HtmlToPdf();
3.
4. Renderer.RenderFileAsPdf("report.html").SaveAs("report.pdf");
```

Opening and viewing documents in Android applications are very interesting and a must to have in every application. You can open any application present on your mobile and you will find that every application contains documents in some or the other way. And among these documents, the most popular and widely used document format is the PDF format. PDF or Portable Document Format is a file format that has captured all the elements of a printed document. This is the most used document format. For example, in the Paytm application, you get your monthly expenses in the form of PDF document. So, if you also want to display some kind of document in your application, then you can open this PDF format document. So, welcome to MindOrks and in this tutorial, we will learn how to open a PDF file in Android programmatically. We will cover the below topics in this tutorial: Project setup, Ways of opening PDF in Android, Making UI and adding Activities for the project, Opening a PDF file using WebView, Opening a PDF file using AndroidPdfViewer library, Project source code and What next? In this tutorial, we will make a project and try various ways of opening PDF file. Here we are going to set up our project: Start a new Android Studio Project, Select Empty Activity and Next Name: Open-PDF-File-Android-Example, Package name: com.mindorks.example.openpdf, Language: Kotlin, Finish. Your starting project is ready now. Under your root directory, create a package named utils. (right-click on root directory > new > package) In the utils package, create one object class: FileUtils. (right-click on utils > new > Kotlin file/class > Object class) If you are preparing for your next Android Interview, Join our Android Professional Course to learn the latest in Android and land job at top tech companies. If you want to display PDF in your Android application, there are various ways of doing it. Some of the ways of opening the PDF can be: From Assets: Let's take an example, if you want to display some icons in your application then you will put all your icons in the drawable folder and then you will use those icons in your application. Same is with the case of PDF files also. If you have some PDF file that is constant and you want to display it in your application then you can put that PDF file in the assets folder and use that PDF in your app. One example can be the Terms and Conditions file. The terms and conditions files are rarely changed. So, you can put that document in the assets folder and use it from device. The other way of opening a PDF is to open it from the device itself. Here, you can open the PDF files present in your mobile device. This is the most used approach for opening the PDF in an Android device. From the Internet: Here, you can open PDF files from the internet. All you need to do is just use the URL of the PDF file and after downloading the PDF file, you can open the PDF file in your mobile application. So, we will look upon all these ways of viewing the PDF in your Android Application. Let's make the UI of the project. In our example, we are going to cover four different cases: Opening a PDF file using WebView, Opening a PDF file from assets using AndroidPdfViewer library, Opening a PDF file from storage using AndroidPdfViewer library, Opening a PDF file from the internet using AndroidPdfViewer library. So, for the first point, we will use WebViewActivity and for 2nd, 3rd, and 4th point, we will be using PdfViewActivity. Create two activities named WebViewActivity and PdfViewActivity. (right-click on root directory > new > Activity > Empty Activity) Now, for the above four actions, create four buttons and assign the task to open activity by those four buttons. The code for the activity\_main.xml file is: We can use the AndroidPdfViewer to open the PDF from: Assets folder, Phone storage, and internet. Firstly, we will look upon how to view PDF, stored in the Assets Folder. Creating an assets folder, creating an assets folder by right-clicking on main > New Folder > Assets Folder and paste the PDF document into it. PDF file name: MindOrks\_Android\_Online\_Professional\_Course-Syllabus.pdf (Create getPdfNameFromAssets() method) Create a method named getPdfNameFromAssets in the FileUtils class. This method will return the name of the PDF file present in the assets folder: fun getPdfNameFromAssets(): String { return "MindOrks\_Android\_Online\_Professional\_Course-Syllabus.pdf" } Now, in the PdfViewActivity.kt file, create a method showPdfFromAssets which will take the file name in string format and will use the fromAssets() method of AndroidPdfViewer library to display PDF: private fun showPdfFromAssets(pdfName: String) { pdfView.fromAsset(pdfName).password(null) // if password protected, then write password.defaultPage(0) // set the default page to open.onPageError { page, \_ -> Toast.makeText(this@PdfViewActivity, "Error at page: \$page", Toast.LENGTH\_LONG).show() }.load() } Call the above method from the onCreate() method and pass the file name by calling the getPdfNameFromAssets method of FileUtils class: private fun checkPdfAction(intent: Intent) { when(intent.getStringExtra("ViewType")) { "assets" -> { perform action to show pdf from storage } "internet" -> { // perform action to show pdf from the internet } } } Call the above method from the onCreate() method: override fun onCreate(savedInstanceState: Bundle?) { super.onCreate(savedInstanceState).setContentView(R.layout.activity\_pdf\_view).checkPdfAction(intent) } Let's learn how to display PDF from assets, storage, and internet. Firstly, we will look upon how to view PDF, stored in the Assets Folder. Creating an assets folder, creating an assets folder by right-clicking on main > New Folder > Assets Folder and paste the PDF document into it. PDF file name: MindOrks\_Android\_Online\_Professional\_Course-Syllabus.pdf (Create getPdfNameFromAssets() method) Create a method named getPdfNameFromAssets in the FileUtils class. This method will return the name of the PDF file present in the assets folder: fun getPdfNameFromAssets(): String { return "MindOrks\_Android\_Online\_Professional\_Course-Syllabus.pdf" } Now, in the PdfViewActivity.kt file, create a method showPdfFromAssets which will take the file name in string format and will use the fromAssets() method of AndroidPdfViewer library to display PDF: private fun showPdfFromAssets(pdfName: String) { pdfView.fromAsset(pdfName).password(null) // if password protected, then write password.defaultPage(0) // set the default page to open.onPageError { page, \_ -> Toast.makeText(this@PdfViewActivity, "Error at page: \$page", Toast.LENGTH\_LONG).show() }.load() } Call the above method from the onCreate() method and pass the file name by calling the getPdfNameFromAssets method of FileUtils class: private fun checkPdfAction(intent: Intent) { when(intent.getStringExtra("ViewType")) { "assets" -> { showPdfFromAssets(FileUtils.getPdfNameFromAssets()) } "storage" -> { // open pdf from storage } "internet" -> { // open pdf from internet } } } Finally, run the application on your mobile device and see the output. Now, we will look upon how to open PDF files from the Phone's storage. So, we have to launch an intent to find the file having PDF format and the selected file will be displayed in the PdfView by calling the fromUri method. Create a function selectPdfFromStorage() in the PdfViewActivity.kt file and add the below code: companion object { private const val PDF\_SELECTION\_CODE = 99 } private fun selectPdfFromStorage() { Toast.makeText(this, "selectPDF", Toast.LENGTH\_LONG).show() val browseStorage = Intent(Intent.ACTION\_GET\_CONTENT).browseStorage.type = "application/pdf" browseStorage.addCategory(Intent.CATEGORY\_OPENABLE) startActivityForResult(Intent.createChooser(browseStorage, "Select PDF"), PDF\_SELECTION\_CODE) } Once, the user selects a PDF, the onActivityResult will be called: override fun onActivityResult(requestCode: Int, resultCode: Int, data: Intent?) { super.onActivityResult(requestCode, resultCode, data) if (requestCode == PDF\_SELECTION\_CODE && resultCode == Activity.RESULT\_OK && data != null) { val selectedPdfFromStorage = data.data.showPdfFromUri(selectedPdfFromStorage) } } Now, create a method named showPdfFromUri that will take a Uri and display the PDF: private fun showPdfFromUri(uri: Uri?) { pdfView.fromUri(uri).defaultPage(0).spacing(10).load() } Now, you can check the output by running your application on your mobile device and select the desired PDF. Lastly, our aim is to view the PDF files from the Internet. We will first download the PDF by using the PRDownloader and then use this file to display the PDF on your PdfViewActivity by using the same process as used for Assets and Storage but here you have to use fromFile() to add display the PDF. So, we need to download the file first by using the PRDownloader library. Initialise it in the onCreate() method of PdfViewActivity: PRDownloader.initialize(applicationContext) Now, you need to download the file from the INTERNET by using the download() method of PRDownloader. So, create a function named downloadPdfFromInternet() in the PdfViewActivity. This function will take the URL, directory path, and file name of the file to be downloaded: private fun downloadPdfFromInternet(url: String, dirPath: String, fileName: String) { PRDownloader.download(url, dirPath, fileName).build().start(object : OnDownloadListener { override fun onDownloadComplete() { Toast.makeText(this@PdfViewActivity, "downloadComplete", Toast.LENGTH\_LONG).show() val downloadedFile = File(dirPath, fileName) progressBar.visibility = View.GONE showPdfFromFile(downloadedFile) } override fun onError(error: Error?) { Toast.makeText(this@PdfViewActivity, "Error in downloading file: \$error", Toast.LENGTH\_LONG).show() } }) } The onDownloadComplete method will be called when the file is downloaded. So, call the showPdfFromFile method and pass the downloaded file to the method: private fun showPdfFromFile(file: File) { pdfView.fromFile(file).password(null).defaultPage(0).enableSwipe(true).swipeHorizontal(false).enableDoubletap(true).onPageError { page, \_ -> Toast.makeText(this@PdfViewActivity, "Error at page: \$page", Toast.LENGTH\_LONG).show() }.load() } Finally, call the downloadPdfFromInternet method from the checkPdfAction method but we need the URL, directory name and file name of the file to be downloaded. We can get the URL by calling the getRootDirPath method in the FileUtils class that will return the root directory: fun getRootDirPath(context: Context): String { return if (Environment.MEDIA\_MOUNTED == Environment.getExternalStorageState()) { val file: File = ContextCompat.getExternalFilesDir(context.applicationContext, null) [0] file.absolutePath } else { context.applicationContext.filesDir.absolutePath } } Now, call the downloadPdfFromInternet method from checkPdfAction method of PdfViewActivity: private fun checkPdfAction(intent: Intent) { when(intent.getStringExtra("ViewType")) { "assets" -> { showPdfFromAssets(FileUtils.getPdfNameFromAssets()) } "storage" -> { selectPdfFromStorage() } "internet" -> { progressBar.visibility = View.VISIBLE val fileName = "myFile.pdf" downloadPdfFromInternet(FileUtils.getPdfUrl(), FileUtils.getRootDirPath(this), fileName) } } } Finally, run the application and try to verify all the three options i.e. assets, storage and internet options to view PDF in Android Application. Try to replace the PDF link used in the above example with your own PDF URL. There are many other methods present in the AndroidPdfViewer library. You can explore all the methods from here. You can get the source code of the whole project from here. You can find more open-source projects by MindOrks from here. Have a look at our Interview Kit for company preparation. Do share this tutorial with your fellow developers to spread the knowledge. You can read more blogs on Android on our blogging website.
